P

Hi - I saw your post on the NextWave forum. For some weird reason I can only read, not post or respond (I never get the validation links). Like you, I wasted my money buying what NextWave recommended for a grease nozzle. I tried a few other things and I'm pasting a picture below of what actually works on my HD510 that I bought in late 2023.

Really, any grease gun will work since as you know it's the nozzle, and reaching the fitting, that are the pain in the ass. The fine-point needle nozzle from Lincoln (model 5803) is the only one that I found that is actually narrow enough to fit perfectly into the grease fittings, and the 12" hose (Performance Tool part# W54221) makes it possible to get the nozzle to the right place.

Hopefully this solves your issue, and if so feel free to post this (since, again, for some reason I can't).

Stay well!
Pete
